NAME

     bk -- design, implement, and optimize excellent software products

SYNOPSIS

     bk --python   **bk -c [rusty]**   **bk --sql [postgres] [mysql]**
     bk --html   **bk --markdown**   **bk --linux**
     bk --git/github   **bk --REST**   **bk --agile**

HISTORY

     Junior Software Engineer   **Trapit, 01/2016-Present**
     – Implemented Gherkin-style QA automation for Trapit's REST API.

     – Reduced time necessary to generate reports, delete users, and import sources
       by 90% through SQL automation.

     – Managed 20+ product releases, coordinating teams and enacting own QA plans.

     – Analyzed, investigated, and/or fixed countless product bugs.

     Associate Product Manager   **Trapit, 11/2014-01/2016**
     – Facilitated delivery of 20+ new software features in an Agile environment,
       completing careful research, clear API documentation, and thorough QA processes.

     – Collaborated 1-on-1 with a senior engineer to design, release, and improve upon
       Trapit's first WordPress plugin.

     – Managed the creation of Trapit's automated branding tool, mapping and scripting
       the final data migration from Parse to a PostgreSQL database.

     Content Analyst   **Trapit, 12/2011-11/2014**
     – Analyzed 600+ websites weekly to power Trapit's source library—the backbone of
       its content curation product.

LEGACY DESCRIPTION

     Oregon State University, B.S. in Computer Science (4.0)   12/2014
     Portland State University, Post-Baccalaureate in Psychology (4.0)   06/2012
     Reed College, B.A. in English (3.56)   05/2006

EXAMPLES

     Automated Music Creator ("Jambot") (2017): CLI and web app to create songs by
     arranging and repeating randomly generated melodies within a particular key.
     Python, Flask, HTML, CSS, Bootstrap, Javascript, Nginx, EC2 (Ubuntu)

     Google Calendar Scheduler (2014): Curses-based CLI and web app allowing users to
     find mutually open times within multiple users' calendars. Python, MySQL, PHP,
     HTML, CSS, Javascript
